974.d14e91feb9fb0d.jpg Marker A: You have to keep in mind that A string is an ordered collection of characters. It's used to represent text and similar information, such as phone numbers, email addresses, and so on. and To compare strings in Python, use the == operator, or the.lower() method. If you don't specify a target type, then it returns Unicode strings. Strings can be compared with other strings of the same type, such as with other strings, or with numeric or Boolean values. To get to the last row you can use something like this: for row in ps.iter_rows(): if row[1].strip()!="": row[1] = row[1].strip() but you are still going to get a warning because you didn't escape your double quotes in your example. -- title: "Update environment" description: "Update the environment configuration. This is equivalent to restarting the environment from the Fargate launch configuration." weight: 1 aliases: - /riak/2.0.9/ops/running/environment/update To update the environment configuration, you must first [stop][stop] the Riak Fargate service that corresponds to the environment. This is equivalent to restarting the environment from the Fargate launch configuration. The following example demonstrates how to update the environment: ""riak-shmidt kill SRIAK_FOLLOWS/riak-fargate-env-1 "" To ensure a successful update, be sure to stop any PVs that are using the environment before you attempt to update the configuration. To update a Riak Fargate environment's configuration, you must specify the Riak Fargate launch configuration. For more information, see [Using Riak Fargate from the CLI][using-riak-fargate-cli]. ## Next Steps Learn more about environment management in [Managing Environments][manage-env]. Learn more about configuring an environment in [Environments][configure-env]. Imaging of the cesarean 82157476af
